

Connect to Tuya

1. Install the Tuya app on your smartphone. We recommend programming Tuya prior to installing your fixture on artwork to ensure ease of access. You must use the same email for Tuya registration as you did for Amazon Alexa or Google Home should you wish to integrate them.
2. Open the Tuya app. You will see a screen noting 'No devices' and a button labeled 'Add Device'. Select this button. (Fig. A)
3. The app will begin searching for nearby devices. To set the fixture into pairing mode, turn the fixture on and off three times (on – off – on – off – on) with a 2-4 second interval between each on or off press.
4. Once in pairing mode, a new box will appear on this screen that notes 'Discovering devices...'. Select the 'Add' button. An item labeled 'TT11W' will appear. Select this item and enter your wifi details. Confirm pairing. (Fig. B)

Disconnect from Tuya

(Re-connecting may aid in troubleshooting)

1. Open the Tuya app. Select your device, originally named TT11W. You may have re-named this for use with your home automation system. (Fig. C)
2. Edit the device using the pencil symbol in the upper right corner of the lighting control screen. (Fig. D)
3. Scroll down to the bottom of this page and select the red 'Remove Device'. When the options appear, select 'Disconnect and wipe data'. Confirm this selection. (Fig. E+F)
4. Follow the above instructions to re-pair your device.

Connect Tuya to Alexa

(assuming Tuya and Alexa are already configured)

1. It is recommended to rename your fixture to an easily identifiable name or phrase.
2. Open the Alexa app. Select 'More' option. (Fig. G)
3. Select the 'Skills & Games' option. (Fig. H)
4. Enter 'Tuya Smart' in the search bar on the top of the screen and select 'Tuya Smart' option. (Fig. I)
5. Select the blue 'Enable to Use' button. (Fig. J)
6. There will be a screen asking to authorize the link between the apps. Select 'Agree and link'. (Fig. K)
7. Your accounts have now been successfully linked. Alexa will now enter Discovery mode. This may take up to a minute. Once your light has been discovered, you may proceed with standard Alexa control setup. (Fig. L)
